

Secure Document Messaging

Communication can be chaotic with considerable staff resources spent managing the flow of information and/or forms from the hospital to outside physicians. Eliminate the chaos by automating and securing the distribution of electronic documents.

- Securely email any form to a physician or clinic, inside or outside your hospital network.
- Create dynamic email content using information from you're his.
- Look up email addresses using information in you're HIS, such as Physician ID or clinic name.
- Assign multiple email recipients automatically based on business logic.
